Problem 1: CyclicRotation — Handwritten Pseudocode

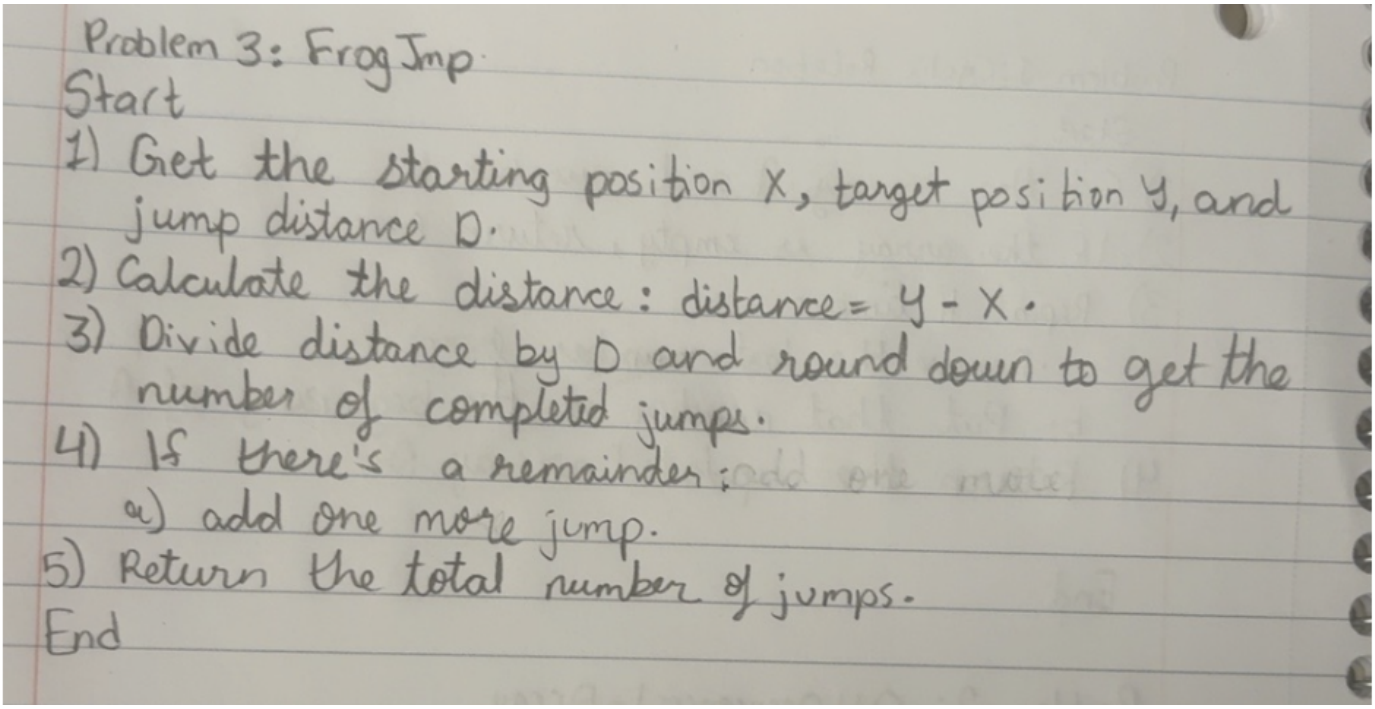

Problem 2: OddOccurrencesInArray — Handwritten Pseudocode

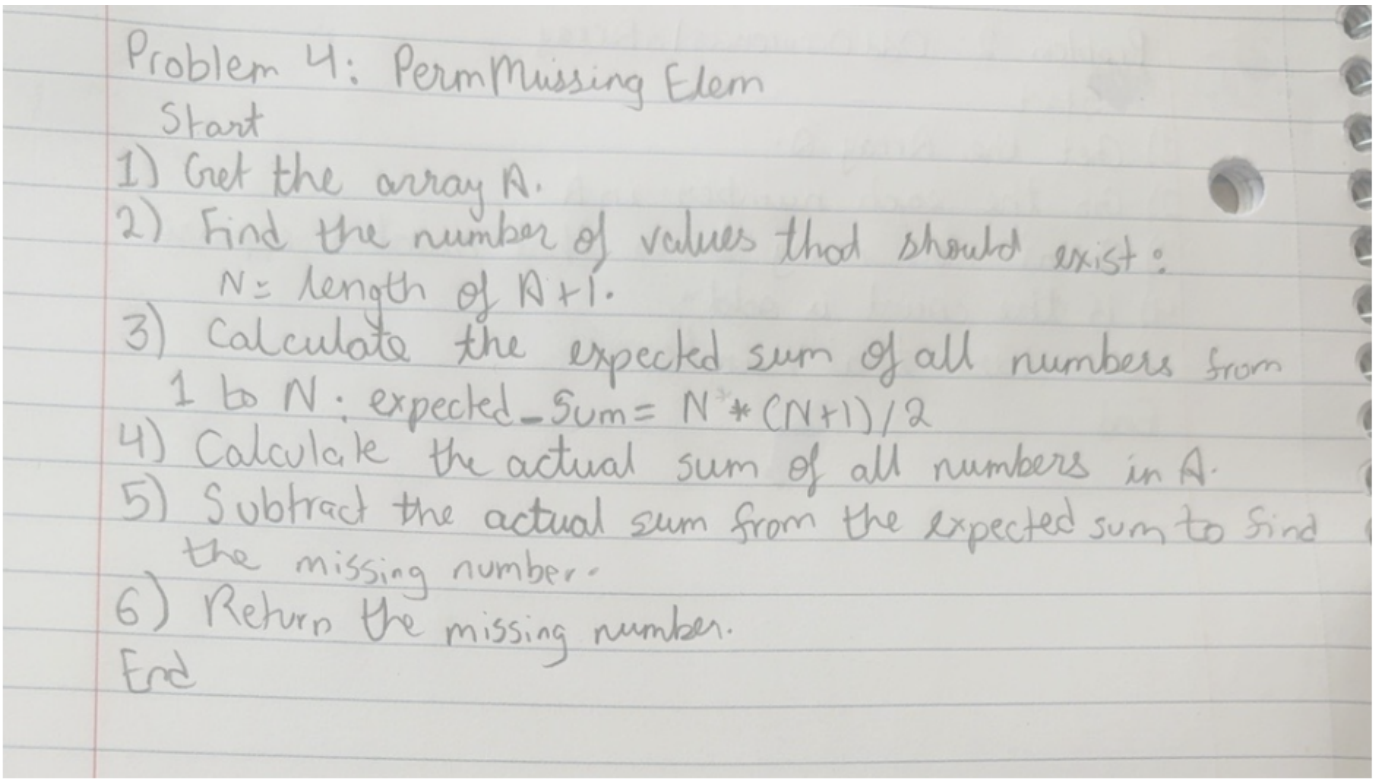

Problem 3 -

```
1   # you can write to stdout for debugging purposes, e.g.
2   # print("this is a debug message")
3
```

Problem 3: FrogJmp — Handwritten Pseudocode

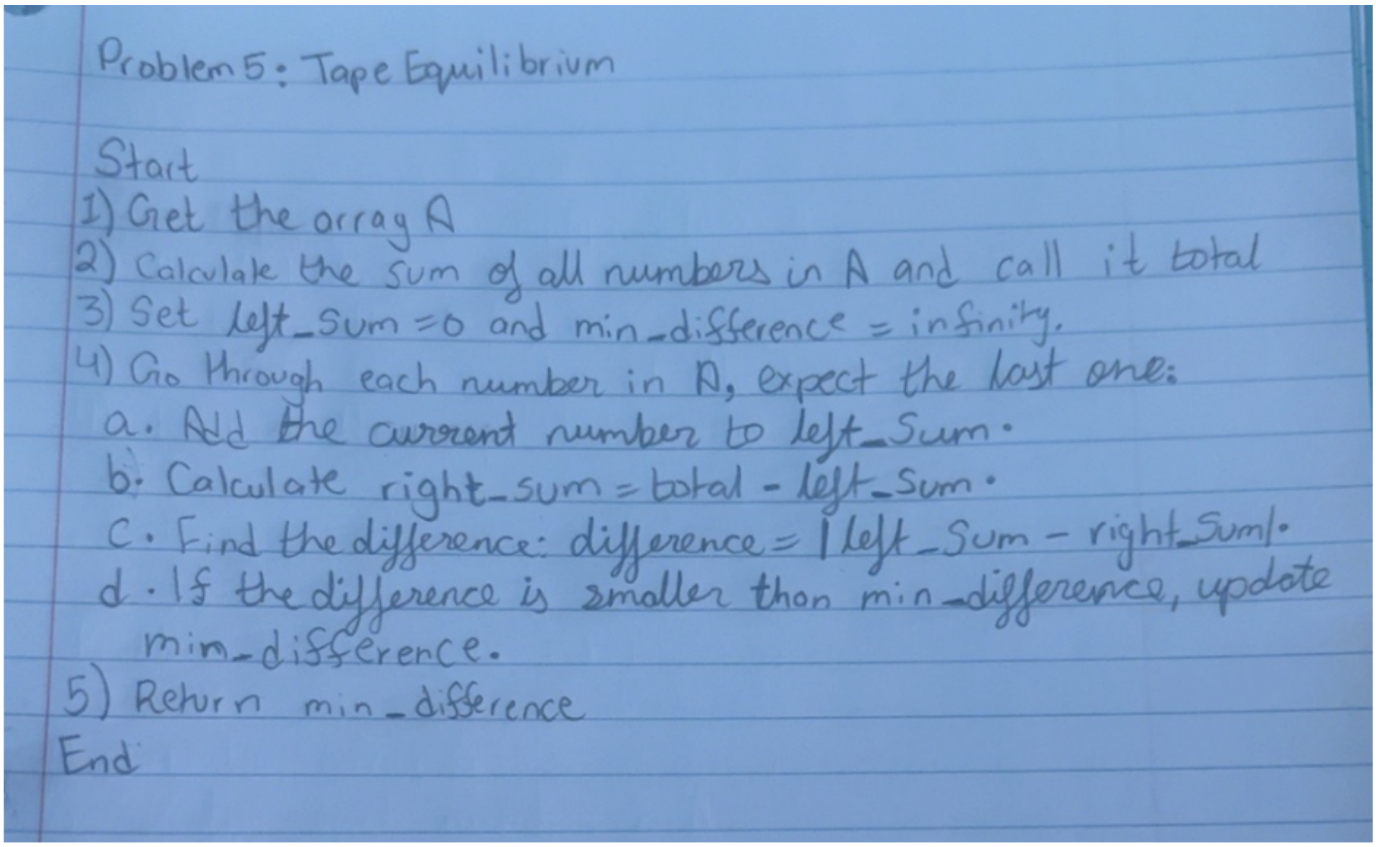

Problem 4: PermMissingElem — Handwritten Pseudocode

Problem 5 -

Problem 5: TapeEquilibrium — Handwritten Pseudocode

Problem 5: Tape Equilibrium

Start
1) Get the array A
2) Calculate the sum of all numbers in A and call it total
3) Set left_sum = 0 and min_difference = infinity.
4) Go through each number in A, expect the last one:
   a. Add the current number to left_sum.
   b. Calculate right_sum = total - left_sum.
   c. Find the difference: difference = |left_sum - right_sum|.
   d. If the difference is smaller than min_difference, update min_difference.
5) Return min_difference
End
